3. Demo

Section 1

Overview of Project Objectives

Defining the Core Objectives

Integration of Key Features

The primary objective of this project is to seamlessly integrate transportation data and real-time traffic information through web browser automation.

Section 2

Transportation Data Integration

Types of Transportation Data

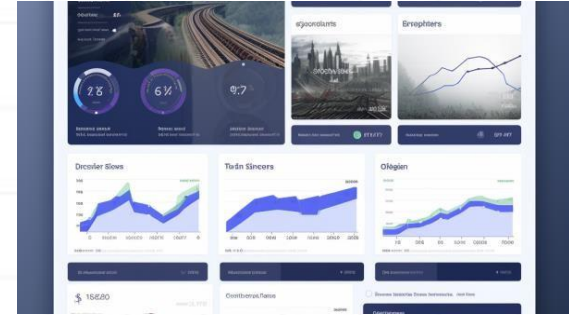

Real-Time Traffic Data

This type of transportation data provides users with live updates on traffic conditions, enabling them to choose optimal routes and avoid delays, enhancing overall travel efficiency.

Public Transit Schedules

Access to schedules and availability of public transportation options allows users to plan their trips effectively, ensuring they can make timely connections and reduce waiting times.

Cost and Distance Metrics

Information on transportation costs and distances between locations helps users compare different travel options, facilitating informed decisions that align with their budget and time constraints.
